Tashkent Medical Academy

Fergana Branch

About Fergana

Ferghana, is the capital of Fergana Region in eastern Uzbekistan. Fergana is about 420 km east of Tashkent, about 75 km west of Andijan, and less than 20 km from the Kyrgyzstan border.

While the area has been populated for thousands of years, the modern city was founded in 1876. It was initially named New Margelan, then renamed Skobelev in 1907 after the first Russian military governor of Fergana Valley. In 1924, after the Bolshevik reconquest of the region from basmachi rebels, the name was changed to Fergana, after the province of which it was the center.

The industrial base of Fergana was developed in the 20th century. Industry in the city included textile manufacturing and a nitric fertilizer plant. Some of the industrial development was a result of Evacuation in the Soviet Union during World War II.

Fergana has been a center for oil production in the Fergana Valley since the region's first oil refinery was built near the city in 1908. Since then, more refineries have been added, and Fergana is one of the most important centers of oil refining in Uzbekistan. Natural gas from western Uzbekistan is transported by pipeline to the valley, where it is used to manufacture fertilizer. The Great Fergana Canal, built almost entirely by hand during the 1930s, passes through the northern part of the city and completed in 1939.
